

# February 16

## Darwin Day Luncheon and Lecture

Unitarian Universalist Center  
1187 Franklin St.  
San Francisco

### **Lecture: What Were the Atoms in Your Body Doing 8 Billion Years Ago: The Story of Cosmic Evolution by Dr. Andrew Fraknoi**

Although few people ever think about it, the atoms that make up your body are “on loan” to you from the Earth’s “atom collection.” Thanks to modern astronomy, we now know the history of these atoms even before they were part of the Earth.

Andrew Fraknoi retired in 2017 as the Chair of the Astronomy Department at Foothill College, and now teaches astronomy courses for retired people at the Fromm Institute at the University of San Francisco and the OLLI Program at San Francisco State.

**Luncheon** will start at 12:00 in Thomas Starr King Room. We will have vegan and vegetarian options. The suggested donation for the luncheon is \$15.00 for each adult and \$5.00 for each child under 18. The lecture is free and will start at 1:00.
